Re: Written *Ex Parte* Presentation
Promoting Interoperability in the 700 MHz Commercial Spectrum,
WT Docket 12-69

Dear Chairwoman Clyburn:

Thank you for your leadership on the broad-based industry consensus to effect the timely and enforceable restoration of interoperability to the Lower 700 MHz band. Restoring interoperability is not only technically feasible and economically rational, but also immensely beneficial to wireless broadband consumers throughout the United States.

We do not share AT&T's concerns about interference; however, we acknowledge and support the enumerated commitments attached to AT&T's letter, which will enable the restoration of interoperability in the Lower 700 MHz band.

Today's action avoids further costly and time-consuming delay.

We look forward to working with the Commission on the implementation of the discrete, enforceable milestones.

Respectfully submitted,

Grant Spellmeyer
Vice President, Federal Affairs &
